

## VISION SOURCING & DEMAND

Vision Sourcing and Demand shifts your enterprise from a traditional, site-centric ethos into a modular, localized, and cost-competitive solution that provides the flexibility needed for success. It delivers business value for your manufacturing, wholesale and distribution organization by establishing greater control over raw material procurement, full package purchasing, finished goods inventory management, and the optimal allocation of available merchandise.

## Product Features

Vision Sourcing delivers complete supply chain visibility by allowing you to capture accurate shipment data of multiple procurement production paths. It supports either full-package or raw material procurement from factories, suppliers, and contractors from any part of the world, resulting in more accurate production forecasts.

Vision Demand is specifically designed to keep manufacturers and wholesalers ahead of customer demand. It optimizes the delivery of available merchandise through the supply chain and ultimately the point of sale. It is a complete sales order processing solution that supports the tracking of all phases of your order processing, prioritization of existing inventory allocation, generation of pick slip tickets, invoice management, control return authorizations and issue credit memos all within a single solution.
